THE ULTIMATE DEFENSE

FOR YOUR OPERATION

Introducing ClariFly® Larvicide Top-Dress Fly Control

ClariFly® Larvicide Top-Dress Fly Control helps prevent the emergence of adult house flies, stable flies, face flies, and horn flies from manure of treated beef and dairy cattle, breeding stock, and show animals. This top-dress supplement also prevents the emergence of house flies and stable flies from the manure of treated sheep, goats, equine and swine.

FIGHT FOUR TYPES OF FLIES

House flies, stable flies, face flies and horn flies are pervasive and resilient pests. Make the most of your control efforts by incorporating ClariFly® Larvicide Top-Dress Fly Control into your integrated pest management (IPM) program. The ideal program incorporating Starbar® products will hit flies where they breed and can help reduce populations to manageable levels. Existing adult flies will not be affected. Start feeding before flies appear and continue use until cold weather marks the end of the fly season.

FEATURES

- The active ingredient Diflubenzuron
- ClariFly® Larvicide branded products are the only diflubenzuron based products approved for five species: beef & dairy cattle, swine, equine, sheep and goats
- Recommended use for show animals and smaller operations
